SUMMARY

Backend and infrastructure engineer with 5 years of experience across AI and fintech, building production services and the systems they run on. Built Go services for a 42TB multi-tenant data migration and federal audit-log ingestion, Java/Spring Boot REST APIs for trading workflows, and Python pipelines that drove $575K in annual cloud savings. Operates what I build: Kubernetes across 12+ clusters, distributed databases, and observability on AWS and GCP.

SKILLS

Backend	Go, Java (Spring Boot, Hibernate), Python (Pandas, Flask, Boto3), SQL, gRPC, REST APIs
Infrastructure	Kubernetes, Terraform, AWS (Lambda, EC2, S3, Glue, RDS, SQS), GCP, YugabyteDB, PostgreSQL, MySQL, MinIO, Prometheus, Grafana, Splunk
Frontend	React, TypeScript, Bootstrap, Next.js
Certifications	AWS Developer Associate, AWS Cloud Practitioner, Advanced Certified Scrum Master

PROFESSIONAL EXPERIENCE

Pryon Inc (AI Startup, Series B) — **New York, NY**

Software Engineer – Backend & Infrastructure | Go, Kubernetes, GCP, Yugabyte, MinIO — Jul 2025 – Present

Platform Team

- Built a Go migration service and led end-to-end migration of capture byte objects across 242 organizations from YugabyteDB (Cassandra CQL) into MinIO object storage, eliminating ~42TB via resumable, idempotent batch processing (prod: 200 orgs / 30TB in ~1 week; mainline: 30 orgs / 7TB in 2 days; dev: 12 orgs / 5TB in half a day).
- Built a full-stack SIEM service enabling the company's STIG compliance initiative – ingesting authentication and RBAC audit logs from 12 microservices and implementing Splunk HEC endpoints to meet federal audit log export requirements.
- Automated and executed the upgrade of Yugabyte Anywhere (YBA) and YugabyteDB instances from Postgres 11 to 15 across 12+ Kubernetes clusters with ~30-minute rolling maintenance windows and zero customer disruption.
- Deployed the org's first Grafana observability cluster, providing full visibility into microservice health and Kubernetes-deployed infrastructure, secured with mTLS and automated certificate management to ensure audit-ready, encrypted log and metrics transmission.

JPMorgan – Commercial & Investment Bank (CIB) — **Aug 2021 – Jul 2025**

Software Engineer II – Java, React, TypeScript, Spring Boot, MySQL — **New York, NY**

Digital Platform Services Team — Jul 2024 – Jul 2025

- Designed and implemented 20+ RESTful API routes for a Java Spring Boot application integrated with MySQL, powering visualizations that help traders build more accurate predictions.
- Built a reusable React/TypeScript package containing 15 data adapter forms for configuring database connections, allowing three applications to seamlessly connect with a wide variety of data sources, improving data retrieval speed by 30%, and enabling users to efficiently request and access tailored datasets.
- Engineered unit and integration tests using JUnit and Mockito, increasing code coverage for a Java Spring Boot application from 20% to 85% and identifying/refactoring 2 API routes to enhance stability and prevent user-facing issues.

Software Engineer I – Python, AWS, Pandas, Boto3, Tableau — **New York, NY**

Market Financial Operations Team — Feb 2022 – Jul 2024

- Developed a Python/Pandas cost-analysis pipeline with automated HTML/Bokeh reporting across AWS and on-prem infrastructure, driving a $575K annual reduction in spend and providing detailed tracking and insights for $500M in architecture expenses.
- Automated ETL workflows with Python and Boto3 to load cost data into AWS S3 and generate Tableau reporting, enabling 225 applications to enroll in an AWS savings program and generating $200K in average quarterly savings.

Software Engineer I – Python, AWS, Terraform — **New York, NY**

Solutions Architecture Team — Aug 2021 – Feb 2022

- Built reusable Terraform infrastructure across 15 Bitbucket repositories to provision IAM policies, Lambda functions, EC2 instances, S3 buckets, and Glue jobs, enabling 300+ CIB Technology teams to migrate to AWS.

EDUCATION

University of Wisconsin – Madison — **Madison, WI**

Bachelor of Science; Applied Mathematics Major, Theatre Major, Computer Science Minor — Class of 2021

- Served as President of Intermission Theatre (IMT) — GPA: 3.5/4.0
